

Yasin Dehfuli

Toronto, ON dehfuliyasin@gmail.com 437 669 9232 LinkedIn GitHub: YaCnDehfuli

Cybersecurity engineer and published researcher who built a startup security function for customer assurance. Raised managed endpoint coverage from **24% to 95%**, established vulnerability and incident workflows, and built ATT&CK-validated detections. Combines security operations with Python automation and memory forensics.

SKILLS

Security Operations: Microsoft Defender, Intune, Entra ID, and Microsoft 365; incident triage, containment, and response, endpoint and identity security, documentation/policies.

Detection & Vulnerability Management: Wazuh, Sysmon, MITRE ATT&CK, Atomic Red Team, OpenVAS, Nmap, and OWASP ZAP; rule development, tuning, risk prioritization, and remediation validation, network security (TCP/IP, segmentation, firewalls).

Memory Forensics: Volatility 3, malware analysis, IoC correlation, QEMU, and tcpdump.

Engineering & Automation: Python, C/C++, Bash, PowerShell, Git, Linux, APIs, and CI/CD.

EXPERIENCE

Security Engineer at *Hadeth*

Mar 2025 - Apr 2026

- Built and operated Hadeth's first security function to support **three prospective customers** requesting evidence of security controls; enrolled **20 of 21 devices** in Intune and Defender and enforced encryption, firewall, antimalware, and compliance baselines, raising managed endpoint coverage from **24% to 95%**.
- Hardened administrative access across Microsoft 365, GitHub, and hosting platforms with MFA and separate privileged accounts; removed **7 stale identities** and **10 excessive permissions**, and closed **3 public services**.
- Engineered **nine Wazuh rules** and hunting queries across Windows authentication, Sysmon, PowerShell, and agent-health telemetry to detect credential misuse, post-exploitation activity, and visibility loss; validated them with **23 ATT&CK-aligned simulations** and reduced recurring non-actionable alerts by **38%** in two months.
- Established a monthly vulnerability-remediation cycle, triaging **42 findings** from Defender, OpenVAS, Nmap, and OWASP ZAP by exploitability, exposure, and business impact; verified closure of **7 of 8 high-severity issues**.
- Operationalized incident response and investigated **8 phishing, suspicious-sign-in, malware, and credential-exposure cases** by correlating Defender, Entra, Sysmon, and email telemetry; established scope and root cause, coordinated containment, and documented remediation.

Security Researcher at *Behaviour-Centric Cybersecurity Center (BCCC)*

Sept 2023 – Nov 2025

- Built and released VolMemLyzer, a Python framework orchestrating **70+ Volatility 3 plugins** with concurrency, caching, timeout controls, and cross-source IoC correlation, reducing per-image triage time by $\approx$ **3–4 hours**.
- Built a reproducible QEMU malware-analysis pipeline using Python, Bash, and PowerShell; ran **2,250 samples** and captured **10,000+ synchronized memory snapshots** with host and network telemetry every 30 seconds.
- As **First Author and Primary Research Developer**, designed and published VADViT, an explainable Vision Transformer for malicious-process detection that achieved **99% accuracy, 92% F1** and generated region-level attention maps.

Teaching Assistant *York University*

Sept 2023 – Apr 2026

- Delivered **20+ hands-on cybersecurity, Linux, and programming labs** for **300+ students** for 6 semesters.

AI Software Engineer *noICT*

Apr 2021 - Aug 2022

- Developed **10+ speech-to-command and smart-home features** using C/C++ on Arduino/Raspberry Pi and Python backend services; integrated device-to-backend data flows and shipped changes through Git-based CI/CD.

EDUCATION

MSc. in Computer Science - *York University* - GPA: 3.9

Sept 2023 – May 2025

BASc. in Electrical & Computer Engineering - *Amirkabir University* - GPA: 3.84

Sept 2017 – Aug 2022

HONORS & AWARDS

* \$67,500 York University Graduate Fellowship (plus 9 other fully-funded scholarships across North America)

2022

* Nominated: Best Master's Thesis Award, Top 3 thesis at LA&PS and top 10 in EECS at York University

2025

* National Elite Foundation Fellowship in Iran: for continuous academic excellence

2018-present
